Registered Charity Number 1148254

Thank you

Your donation will help to save a precious life. Thank you.

Safe Anaesthesia Worldwide

Delivering safe anaesthesia wherever it is needed

Can you imagine a world without anaesthesia?

Most of us take the availability of anaesthesia for granted. But millions of people in the developing world are not so fortunate. In poor countries, many hospitals lack suitable anaesthetic equipment, pain relieving medicines and trained medical staff.

Office use

It's hard to imagine a world without anaesthesia

170 years ago anaesthesia revolutionised surgery by making it pain free and safer. Incredibly, anaesthesia is still not available to millions of people in the poorest countries.

Just imagine...

- You are pregnant and need a caesarean section to save the life of your baby – but there is no anaesthesia.
- You've been involved in a road accident and need emergency surgery – but there is no anaesthesia.
- Your child is born with a deformity needing corrective surgery – but there is no anaesthesia.

In developing countries hospitals are few and far between. As a result, people may have to make long hazardous journeys to reach them, often when they are desperately ill. The hospitals are over-crowded and poorly equipped. Without anaesthesia emergency operations cannot be performed and many patients do not survive, especially women in childbirth and children.

The charity **Safe Anaesthesia Worldwide** saves lives by providing vital anaesthetic equipment, training and support to people in need around the globe. We work closely with local hospitals and staff to ensure that we supply precisely what they need.

Developing world hospitals need equipment that will work in difficult conditions, such as this portable anaesthesia kit designed for humanitarian work in remote locations by Diamedica (UK) Ltd.

Suitable equipment

The sophisticated anaesthetic equipment used in Britain is unsuitable for most hospitals in developing countries, where oxygen and electricity are unreliable and machines are not maintained for lack of skilled engineers.

Safe Anaesthesia Worldwide provides only appropriate anaesthetic equipment that is safe, effective and inexpensive to use in any situation.

Essential surgery

Anaesthesia is essential for surgery to treat many life-threatening conditions. For example, tens of thousands of mothers and babies tragically die each year due to complications at birth whose lives could be saved by surgery (caesarean sections).

Many people die or are left disabled by serious injuries from road accidents, burns from open cooking fires, club foot or cleft palate, tumours and painful hernias, all needing surgical treatment.

Anaesthesia is crucial for life saving surgery

"Having taught extensively in the developing world and seen hospital conditions at first hand, I know that the provision of appropriate anaesthetic equipment and training will relieve suffering on a massive scale"

*Dr Roger Eltringham
MBChB, FRCA.*

Worldwide**

Safe Anaesthesia Worldwide

Help us to save lives by providing:

- ✓ **ANAESTHETIC EQUIPMENT** that is suitable for use in developing countries to hospitals in need.
- ✓ **TRAINING** for medical and technical staff in poor countries to safely deliver anaesthesia and to keep the anaesthetic equipment in good working order.
- ✓ **RESEARCH** into ways of improving the delivery of safe anaesthesia in poor countries.
